Curriculum Vitae Revised

11-02-2026

SUMMARY

I am a Senior Executive (currently Chief Information Security Officer) with 10 years of experience across industrial environments with background in construction industry and hardware manufacturing and currently I am working Cybersecurity Infrastructures, IT Operations and SIA Integrated Security Services across-sector spanning security operations, information security, engineering delivery, and software/AI. Known for turning complex requirements into practical, compliant solutions—improving safety, resilience, and operational efficiency. Active in continuous professional development (data science, cybersecurity, management) and comfortable operating in fast-moving, stakeholder-heavy environments. I lead more projects and teams with an high margin of profitability.

PROFESSIONAL EXPERIENCE

KAMIWEB PROJECT LTD (June 2023- Present) Founder & Managing Principal
London, United Kingdom, <https://www.kamiwebproject.com>

Kamiweb Project is a dynamic software company that excels in the field of DevOps and Salesforce, offering a comprehensive range of services tailored to meet the evolving needs of modern businesses. With a focus on innovation and excellence, Kamiweb Project specializes in developing cutting-edge web, mobile, and desktop applications, leveraging the latest technology to deliver robust and scalable solutions. In addition to application development, Kamiweb Project is deeply invested in cybersecurity, providing top-tier offensive security measures to safeguard digital assets against emerging threats. This aspect of their service is crucial for businesses operating in today's digital landscape, where security risks are ever-present and constantly evolving. Furthermore, Kamiweb Project distinguishes itself in the field of data science and marketing. By harnessing the power of data analytics and advanced marketing strategies, they assist businesses in unlocking valuable insights, enhancing customer engagement, and driving growth. This holistic approach ensures that their clients not only have the best technological solutions but also the insights and strategies to maximize their impact in the marketplace. Overall, Kamiweb Project LTD stands as a beacon of innovation and reliability in the software industry, consistently delivering high-quality services that propel businesses forward in the digital age.

SKYDATASOL LTD (June 2022-Present) Founder & Chief Executive Officer
London, United Kingdom, <https://www.skydatasol.com>

A business that combines Petrochemicals, Renewables, Constructions, and Software would likely be a diversified company with operations across multiple industries. The Petrochemicals division of the business would involve the production and sale of chemicals derived from petroleum, such as plastics, resins, and solvents. This division would likely require significant investment in refineries, petrochemical plants, and distribution networks. The Renewables division would focus on developing and operating renewable energy projects, such as wind farms, solar arrays, and hydroelectric power plants. This division would require expertise in engineering, construction, and project management. The Constructions division would involve the design and construction of infrastructure projects, such as highways, airports, and buildings. This division

would require expertise in engineering, project management, and construction management. Finally, the Software division would involve the development of software applications and services for use across all divisions of the company. This division would require expertise in software development, user experience

design, and data analytics. Overall, this type of business would likely have a significant focus on innovation and sustainability, leveraging technology and expertise across multiple industries to create value and competitive advantage. The business would need to have a strong leadership team with experience in each of the respective industries to ensure successful integration and execution across all divisions.

NATIONAL SECURITY FRAMEWORK OF ANTARCTICA (December 2023-Present) Lead Research Manager & Chief Information Security Officer

Ushuaia, Argentina, www.nationalsecurityframework.org

Antarctic National Security Framework is a contemporary Groundbreaking South Pole Expedition Antarctic National Security Framework (ANSF), a pioneering force in geostrategic research and resource exploration, and is excited to announce a landmark expedition to the South Pole. Under my leadership of Lead Research Manager, the initiative aims to fortify global environmental and energy security through advanced networking and communication systems, exhaustive exploration for rare earth elements, and comprehensive oil and gas resource assessment, alongside detailed land mapping efforts. This multifaceted expedition is not just a testament to ANSF's commitment to cutting-edge research but also a crucial step towards understanding the vast, untapped potential of the Antarctic region. By deploying state-of-the-art technology and methodologies, ANSF seeks to pave the way for responsible and sustainable resource utilization that aligns with global environmental standards and practices. The South Pole expedition is poised to deliver unprecedented insights into the Antarctic's complex ecosystem and resource base. The establishment of advanced networking and communication systems will ensure seamless integration and data exchange among international research teams, fostering global collaboration in tackling pressing environmental and energy challenges. Moreover, the exploration for rare earth elements and oil and gas resources is set to redefine our approach to resource management and energy independence. These endeavors, coupled with meticulous land mapping, will enhance our understanding of the Antarctic terrain, contributing significantly to global scientific knowledge and security frameworks. ANSF is dedicated to the principles of transparency, environmental stewardship, and international cooperation. As such, the findings and developments from the South Pole expedition will be shared with the global community, ensuring that the benefits of this project are accessible.

SKY CRYPTO B.V. (SkyCoin) (June 2014 - December 2019) - CHIEF EXECUTIVE OFFICER

Amsterdam, Netherlands, www.skycoin.com

This business may have been successful in the past, generating strong revenues and profits, and investing heavily in growth and expansion. However, due to a combination of factors such as market competition, economic downturns, or mismanagement, the business may have taken on too much debt to sustain its operations. As a result, the company may be experiencing cash flow issues and struggling to meet its debt payments. It may have to divert a significant portion of its revenue towards servicing its debt, leaving little room for further investment or growth. Sky Crypto was forced to sell off assets, reduce staff, and restructure its operations to try and manage its debt load. Sky Crypto filed for bankruptcy and be forced to shut down. To avoid this situation, it's important for businesses to carefully manage their debt levels and ensure they have adequate cash flow to meet their debt obligations. This may involve seeking alternative forms of financing, such as equity or convertible debt, or implementing cost-cutting measures to reduce expenses and improve profitability.

MATERIAL IN MOTION (January 2016 – April 2019) Senior Executive

Oude Meer, Netherlands, <https://www.materialinmotion.com>

As a senior executive at Material in Motion, a company manufacturing supply chain servers and data storages in the United States, Netherlands, and China, my role would involve overseeing key aspects of the business. I was responsible for strategic decision-making, managing teams, and driving the company's overall growth and success. Specifically, I was involved in developing and implementing the company's manufacturing and supply chain strategies, ensuring efficient production processes, optimizing logistics and distribution networks, and maintaining high-quality standards for the servers and data storages. My responsibilities also include collaborating with cross-functional teams to drive innovation and product development, identifying market trends and opportunities, and establishing strong relationships with suppliers, partners, and customers. As a senior executive, I was playing a crucial role in setting and achieving business targets, monitoring financial performance, and ensuring compliance with relevant regulations and industry standards. My leadership skills, business acumen, and ability to navigate the complexities of international markets would be essential in driving Material in Motion's success in the competitive landscape of the technology industry.

EDUCATION BACKGROUND

BIRKBECK UNIVERSITY OF LONDON – United Kingdom
Bachelor of Data Science and Computing (October 2023-July 2027) (Ongoing year 3 of 4)

Birkbeck, University of London, known for its evening higher education and research, offers the Data Science and Computing with Foundation Year program. This ongoing program, likely part-time, combines theoretical and practical aspects of data science. It covers machine learning, data analytics, big data technologies, and programming, emphasizing computational and statistical foundations. I will gain hands-on experience with data tools and programming languages like Python and R. I develop skills in data visualization, machine learning algorithms, and data mining. Opportunities for further and collaboration with industry partners are provided, with access to modern computing labs and library resources. The program prepares students for careers in data science, analytics, and related fields, facilitated by a strong alumni network. With a diverse student cohort and support services, Birkbeck's central London location offers a vibrant learning environment with professional and cultural opportunities.

TEESSIDE UNIVERSITY – United Kingdom
Higher National Certificate & Diploma in Chemical Engineering HNC/HND (Ongoing)

The Higher National Certificate and Diploma HNC/HND in Chemical Engineering from Teesside University is a two-year vocational qualification. It integrates theoretical studies with practical training in areas such as process design, thermodynamics, and environmental engineering. Students engage in laboratory work and projects to acquire hands-on experience. Assessment includes coursework, exams, and project work.

Graduates can secure positions in the chemical and pharmaceutical industries as process or research technicians. Additionally, the HNC and HND facilitates further education, often allowing graduates to enter the third year of a bachelor's degree in chemical engineering. The program equips students with problemsolving skills, technical proficiency, and teamwork capabilities, providing a robust foundation for a career or advanced studies in the field.

ENGINEERING INSTITUTE OF TECHNOLOGY EIT – Australia
Advanced Diploma of Civil & Structural Engineering (February 2023 - June 2026) (Ongoing)

The Engineering Institute of Technology (EIT) is a leading private college based in Australia, known for delivering practical, industry-oriented engineering and technology education. EIT offers a range of programs, including diplomas, advanced diplomas, undergraduate and postgraduate degrees, all designed to meet the needs of working professionals and industry standards. The Advanced Diploma of Civil and Structural Engineering at EIT equips students with a robust foundation in civil and structural engineering principles, combining theoretical knowledge with practical skills. The program's flexible delivery, industry-oriented curriculum, and strong focus on employability make it an excellent choice for those seeking to advance their careers in civil and structural engineering.

SKILLS

Industry acknowledgment:

Business	Technology
I can run end-to-end accounting and finance operations, from daily bookkeeping and multi-currency bank reconciliations to management accounts, VAT returns and statutory year-end packs, using platforms such as Xero, QuickBooks, Sage, FreeAgent and Excel/Google Sheets with advanced functions and Power Query. I'm comfortable building cash-flow forecasts, budgets and rolling re-forecasts, designing KPI dashboards and cohort analyses, and valuing initiatives with DCF, payback and IRR. In project management I define scope and success criteria, decompose work with WBS and critical-path thinking, schedule in MS Project or Smartsheet, track delivery in Jira/Trello/Asana, manage RAID logs, run stand-ups, reviews and retros, and control change, risks and vendor SLAs. For startups I work through lean discovery and customer interviews, map business	On the software side I design and build full-stack systems with Python, JavaScript and TypeScript, using frameworks like FastAPI, Django, Node/Express and React/Next; I model data in PostgreSQL and MySQL, use Redis for caching and Celery or sidekiq-style workers for async jobs, and expose clean REST/GraphQL APIs with robust contract tests. I ship mobile apps with Flutter or React Native and maintain desktop tooling with Electron or .NET when needed. My delivery workflow relies on Git and trunk-based development, automated testing in PyTest/Jest, containerization with Docker, orchestration with Kubernetes, infrastructure as code via Terraform, and CI/CD using GitHub Actions or GitLab CI. In data science I handle wrangling with Pandas and Polars, feature engineering and model training with scikit-learn, XGBoost, LightGBM and PyTorch, visualization

models with the Lean Canvas, design MVP experiments, build GTM plans across inbound and outbound, instrument funnels with GA4 and Mixpanel, and prepare data-driven pitch decks and investor rooms. In HR and recruitment I create competency frameworks and job descriptions, run structured interviews with scorecards, manage pipelines in Greenhouse or Workable, organize onboarding and probation goals in BambooHR or Personio, implement performance cycles and lightweight OKR cadences, and ensure compliance with GDPR, equal-opportunity policy, and right-to-work checks.	in Matplotlib/Plotly and experimentation tracking with MLflow; for data engineering I design robust ELT pipelines using Airflow, Dagster or Prefect, transform data with dbt, stream events with Kafka, and operate warehouses such as BigQuery, Snowflake or Redshift with dimensional modeling and data contracts. Information security is embedded in my designs through threat modeling, zero-trust principles, secrets management, proper IAM, dependency scanning and SAST/DAST; I understand OWASP Top 10 and NIST CSF, can harden Linux and containers, and operate SIEM/SOAR stacks like Splunk and Elastic for detection and response. I lead technical teams with clear roadmaps, architecture decision records and blameless post-mortems, and I keep a hacker's mindset with practical tools such as Nmap, Wireshark, Burp Suite, Metasploit and OSINT techniques to probe attack surface and tighten defenses.
Engineering In civil and structural engineering I read and produce drawings, specifications and method statements, understand loads, materials and foundation options, and reference Eurocodes and relevant BS/EN standards while modeling in AutoCAD, Revit, Tekla or STAAD and coordinating with BIM workflows and clash detection. In chemical engineering I work with process flow diagrams and P&IDs, perform mass- and energy-balance reasoning, support unit operations (distillation, heat exchange, pumping and reaction), and use Aspen HYSYS or ChemCAD for simulation; I participate in HAZID, HAZOP and LOPA workshops and develop operating procedures with clear control points. Mechanical engineering skills include mechanism design, tolerance stacks and GD&T, materials selection, reliability thinking and maintainability planning; I prototype in SolidWorks or Inventor, analyze with ANSYS or basic FEA/CFD awareness, and apply DFM/DFA and lean methods on the shop floor. In electrical and electronics I read schematics and single-line diagrams, size conductors and protection in line with IEC/BS 7671, diagnose faults with multimeters and oscilloscopes, and simulate with LTspice or MATLAB/Simulink, while understanding PLC/SCADA fundamentals and industrial communication. With astronomy and astrophysics I grasp observational methods, photometry and spectroscopy basics, ephemerides and celestial mechanics, and I'm comfortable with Python scientific tooling—astropy, Jupyter and NumPy—for data reduction and visualization, as well as practical considerations like calibration frames and signal-to-noise.	Legal I perform legal secretary and advisory functions with high document discipline, managing diaries, deadlines and bundles, organizing disclosure, formatting statements and exhibits, and maintaining accurate file notes and version control in systems like iManage or SharePoint. I research efficiently on Westlaw, LexisNexis and Practical Law, synthesize statutes and case law, and translate findings into plain-English advice. I draft letters before action, service agreements, NDAs and basic policies, track negotiation points, and keep change logs through the contract lifecycle, using DocuSign and CLM tools where appropriate. I navigate civil procedure and pre-action protocols, understand evidence, privilege and data protection, and can support employment and commercial matters—from disciplinary procedures and settlement agreements to supplier terms—while aligning advice with risk appetite and compliance duties.
Security Licensed and operational across SIA roles—Door Supervisor, Security Guard, Key Holding, Close Protection, CCTV (Public Space Surveillance), and Cash & Valuables in Transit—bringing end-to-end capability from frontline presence to protective	Medicine As a mental health and psychiatry apprentice I take structured histories, assess mood, thought content and cognition, screen risk using standardized tools, document clearly with SOAP notes, and escalate appropriately with SBAR; I understand consent,

intelligence. On licensed premises I apply the Licensing Act 2003 objectives in practice, running dynamic risk assessments at entry points, managing search policies, refusals and ejections with proportionate use of force, and maintaining incident logs, body-worn video continuity and evidence-grade statements. In guarding and mobile response I plan and execute patrol regimes and key-holding callouts with lone-worker safeguards, escalation pathways and post-incident reporting aligned to BS 7499 and BS 7984-1. In CCTV/PSS I operate PTZ and fixed networks through VMS platforms such as Milestone, Genetec or Avigilon, maintain audit trails, export footage to evidential standards, and ensure governance under the Surveillance Camera Code, BS 7958, GDPR and data minimisation principles. CVIT duties include route and timing variance, secure loading protocols, two-person integrity, radio discipline and tracker/duress workflows, all built on thorough threat assessments and liaison with alarm receiving centres.

Close Protection work covers client profiling, advances and site recces, layered venue and vehicle security, low-profile movement, residential protection, protective surveillance awareness and contingency planning. I build movement plans with primary and alternate routes, choke-point analysis and arrival/departure drills, and coordinate with venue security, police and medical cover where appropriate. Protective intelligence blends open-source scanning, pattern-of-life awareness and vulnerability/threat assessments to inform posture, while maintaining strict confidentiality, cultural sensitivity and legal compliance. Skills include situational awareness, protective formations appropriate to context, emergency actions for contact/medical/evacuation, and after-action reviews that feed continuous improvement without disclosing sensitive methods.

Counterterrorism capability is grounded in recognised UK practices and awareness training (e.g., ACT Awareness, SCaN), hostile reconnaissance detection, and the application of simple, proven frameworks on the ground: HOT for unattended items, the 5Cs for bomb threats at a high level, JESIP's M/ETHANE for multi-agency reporting, and effective cordon and crowd management in line with Purple Guide principles. I understand hostile vehicle mitigation concepts (PAS 68/IWA 14), site hardening, mail-handling precautions, SIGACT logging and scenario-based exercising that improves staff readiness without revealing tactical details. My focus is always prevention first: deter, detect and report—supported by accurate information flow, disciplined radio procedure, and collaboration with NaCTSO guidance and local CT police where relevant.

As a policing apprentice, I work with the National Decision Model and the College of Policing Code of Ethics, balancing necessity, proportionality and accountability in every intervention. I understand

capacity, confidentiality, safeguarding and the basics of DSM-5 and ICD-11 classifications, along with stepped-care models, psychoeducation and the role of multidisciplinary teams. I'm trained as a first aider at work under HSE guidance, able to secure a scene, conduct a primary survey, deliver CPR with AED, manage choking, bleeding and shock, recognize red flags such as stroke, MI and anaphylaxis, apply splints and burns care, and hand over effectively to emergency services while maintaining an incident log and respecting infection prevention and control.

Alongside mental health and psychiatry apprentice skills—structured history taking, risk assessment, documentation with SOAP, and SBAR escalation—I also focus on staff mental health and wellbeing in clinical and high-stress environments. I apply HSE Management Standards for work-related stress and integrate NICE-aligned approaches to prevention, early identification and signposting. In practice that means running or supporting stress risk assessments at team and role level, promoting psychologically safe teamwork, and building predictable shift patterns with adequate rest, informed by fatigue management principles. I use validated screening tools appropriately in a non-diagnostic workplace context (for example PHQ-9 and GAD-7 for signposting), maintain strict confidentiality, and coordinate with Occupational Health, line managers and HR to implement reasonable adjustments, phased returns and supportive performance goals. I'm confident facilitating or contributing to debriefs after critical incidents (CISM-style frameworks), Schwartz Rounds or reflective practice sessions, with clear ground rules that protect participants and preserve learning. I champion anti-bullying and harassment policies, Equality Act duties, and trauma-informed communication—spotting red flags for burnout, moral injury or acute stress, and activating escalation pathways without pathologising normal stress responses.

As a first aider at work I ensure scene safety, primary survey and CPR/AED competence while maintaining infection prevention and control; for mental health I act as an early-support contact who can listen, normalize help-seeking, and signpost to EAP, GP or crisis services when indicated. I keep records appropriate to a workplace setting, separate from clinical notes, respect consent and capacity, and uphold boundaries between supportive workplace interventions and clinical treatment. The overall aim is a resilient, compassionate culture: reducing psychosocial risks at source, equipping staff with self-care and peer-support tools, and aligning wellbeing initiatives with operational realities so teams can perform safely and sustainably.

PACE powers and Codes at an awareness level, the use-of-force continuum, stop/search grounds in principle, and the importance of safeguarding, Prevent and vulnerability assessments (THRIVE). Crime scene preservation, chain of custody, concise MG11-style statement writing, notebook standards and evidence continuity are routine, alongside respectful victim/witness engagement and de-escalation rooted in behavioural cues. Across all roles I bring strong command of control-room to ground communications (clear plain-English voice procedure, disciplined brevity, call-sign hygiene), incident management tools (TrackTik, SmartTask or similar), body-worn video and access-control systems, and I embed ISO/NIST-aligned security by design in SOPs and training. My practice is standards-literate—BS 7858 for screening, BS 7499 for guarding, BS 7958 for CCTV control rooms, BS 7984-1 for key-holding—and legally sound under GDPR, the Human Rights Act and relevant common-law principles. The result is a measured, professional security posture that prioritises prevention, proportionate response, duty of care and evidential integrity.

PROJECTS AND CONTRIBUTIONS

Contribution: 111 W 57th St New York, NY 10019, USA

https://drive.google.com/file/d/19dNhwHDpu_2mV7LdeLSLKv4_CBcCh3nG/

Role and Responsibilities:

- **Super-Slender Tower Design:** Played a crucial role in the structural engineering of one of the most slender residential towers in the world. The project required innovative structural solutions to support the height-to-width ratio of the building.
- **Wind Load Mitigation:** Conducted advanced wind load analysis and implemented a tuned mass damper system to minimize sway and ensure occupant comfort in high wind conditions.
- **Material Optimization:** Worked on optimizing the use of high-strength materials to achieve the necessary structural support without increasing the building's weight excessively.

Key Challenges:

- **Slenderness Ratio:** The extreme slenderness of the tower posed unique challenges in terms of lateral stability, requiring cutting-edge engineering techniques to ensure the building's safety and performance.
- **Foundation Design:** The narrow footprint of the building required a deep and carefully engineered foundation to distribute loads effectively and avoid settlement issues.

- **Construction Sequencing:** The constrained site required meticulous planning of the construction sequence to avoid structural issues and delays.

Outcomes:

- Delivered a structurally robust and stable tower that stands as a landmark on the Manhattan skyline, showcasing advanced engineering techniques and contributing to the trend of super-slender high-rises in New York City.

Contribution: 161 Maiden Ln, New York, NY 10038, USA

<https://drive.google.com/drive/folders/1KMjC5dncc0552bDwU8U7o2mfk2ggyNto>

Role and Responsibilities:

- **Structural Design and Analysis:** Developed detailed structural design plans, ensuring compliance with local building codes and regulations. Utilized advanced structural analysis software to evaluate the building's load-bearing capacity and stability under various conditions.
- **Foundation Design:** Designed a robust foundation system to support the high-rise structure, considering the geotechnical conditions of the site near the East River.
- **Construction Oversight:** Monitored the construction process to ensure the structural elements were built according to the design specifications. Addressed any issues related to material quality and construction techniques in real-time.

Key Challenges:

- **Soil Stability:** The proximity to the waterfront required careful analysis of soil stability and implementation of measures to prevent settlement and lateral movement.
- **High Wind Load:** The building's height necessitated detailed wind load analysis to ensure structural integrity during high wind events.

Outcomes:

- Successfully delivered a structurally sound building that meets all safety and design criteria, contributing to the skyline of lower Manhattan.

Contribution: 75 11th Ave, New York, NY 10011, USA

<https://drive.google.com/drive/folders/1nHZvCI1tgO-y5 i BKGvywtWLigjLfcn>

Role and Responsibilities:

- **Structural Engineering:** Led the structural engineering design for a mixed-use development, incorporating residential, commercial, and public spaces.
- **Integration with Architectural Design:** Worked closely with the architects (Bjarke Ingels Group - BIG) to ensure the structural system complemented the building's unique geometric form.
- **Material Selection:** Advised on the selection of materials that provided the necessary strength while supporting the architectural vision of the project.

Key Challenges:

- **Complex Geometry:** The building's unique shape required innovative structural solutions to support irregular loads and unconventional architectural elements.
- **Coordination with Multiple Disciplines:** Collaborated with MEP (Mechanical, Electrical, and Plumbing) engineers to integrate systems without compromising the building's structural integrity.

Outcomes:

- Delivered a structurally sound framework that allowed the realization of a distinctive architectural vision, contributing to the dynamic character of New York's West Side.

Contribution: 125 Greenwich Street, New York, NY 10006, USA

https://drive.google.com/drive/folders/1E6f1OaU0_DSNB1CYeo2RQZMnq8wYerT8

Role and Responsibilities:

- **High-Rise Design:** Designed structural systems for a supertall residential tower, focusing on optimizing the structure for both seismic and wind forces.
- **Core and Outrigger System:** Developed a core and outrigger system to enhance the building's stability and reduce sway, providing comfort and safety for residents.
- **Construction Documentation:** Prepared detailed construction documents, including drawings and specifications, ensuring all structural components were clearly defined and executable by the construction team.

Key Challenges:

- **Seismic Design Considerations:** Given the height and location of the building, seismic analysis was critical to ensure the building could withstand potential earthquakes.
- **Tall Building Dynamics:** Addressed challenges related to building movement, especially under wind load, to minimize discomfort for occupants.

Outcomes:

- The project was completed with a focus on safety, efficiency, and longevity, contributing to the luxury residential market in Lower Manhattan.

Project: 5301 Wisconsin Ave #710 Washington, DC 20015, USA

<https://drive.google.com/file/d/1xf7i4dCvrnMLPhNVXVZ2BuFZgdyxNa>

Role and Responsibilities:

- **Structural Renovation:** Involved in the structural renovation of an existing office building, enhancing the building's load capacity to accommodate modern office requirements.
- **Code Compliance:** Ensured the renovation met current building codes, particularly concerning structural retrofitting for seismic resistance.
- **Project Coordination:** Coordinated with architects and contractors to integrate new structural elements with the existing framework without disrupting ongoing operations.

Key Challenges:

- **Working Within an Existing Structure:** Retrofits required careful analysis to integrate new structural components with minimal disruption to the existing building fabric.
- **Live Load Adjustments:** Adjusted the structural system to support increased live loads due to changes in building use.

Outcomes:

- Successfully extended the lifespan of the building, providing a safer and more functional space for tenants, while preserving the building's historical significance.
